GENERAL INFORMATION

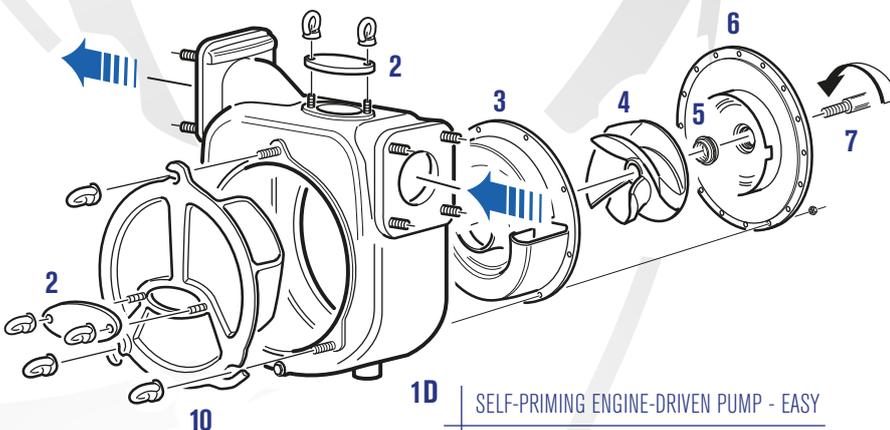

RB SELF-PRIMING PUMP | 1A

1C | RW VACUUM-ASSISTED PUMP

1B | RC CENTRIFUGAL PUMP

1D | SELF-PRIMING ENGINE-DRIVEN PUMP - EASY

ROBUSTA pump series are centrifugal open impeller type at high hydraulic efficiency, internally armoured to resist pumping abrasive and corrosive slurry or with suspended abrasive material liquids.

The armoured shaped volute placed inside the pump is made, as standard, by a very abrasion resistant material or in other material suitable to the pumped liquid. Moreover the armoured volute is mounted onto the pump without any internal screws.

There are many advantages by having an independent armoured volute inside the pump body, such as:

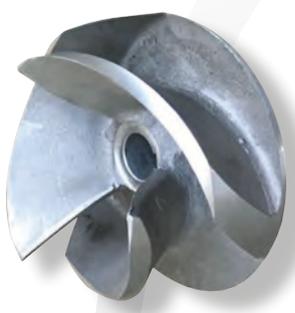

- ✓ the possibility to have several diversified hardness materials where the fluid speed is higher
- ✓ the possibility to have diversified materials of construction within the pump components
- ✓ the positioning of the volute within the pump body is variable according to the series and not fixed
- ✓ there are no screws in the inner pump body
- ✓ the volute replacement is fast and permanent
- ✓ the pump wear and tear are placed between the armoured volute and the impeller only, voiding the pump body
- ✓ a sharper noise reduction on the impeller.

ELECTRIC PUMPS

CENTRIFUGAL SELF-PRIMING PUMPS

RB series

For industrial applications.

Its particular pump body's shape allows the self-priming without the need to fill in the suction pipe and without the installation of the foot valve.

The self-priming is quick and reliable in any applications, thanks to the peculiar position and interaction of the Volute with the pump body.

Available with base-frame or monobloc coupled to electric normalized motor.

>>> PAGE 14

VACUUM-ASSISTED

RW series

For building applications, drainage (wellpoint).

A vacuum pump is incorporated to the self-priming pump, which device, automatically separate and take out the air coming from the suction.

Suitable for dewatering having long suction pipes installations or in wellpoints groundworks (water lowering).

Priming is completely automatic avoiding the need to add water (dry-prime) and can operate even in dry conditions (dry-run).

>>> PAGE 68

CENTRIFUGAL PUMPS

RC series

For industrial applications.

It is centrifugal with flanged inlet and outlet, available with shaft coupling or monobloc driven by electric motor.

Such pumps are suitable for industrial application, to pump slurry or liquids containing abrasive suspended materials.

SELF-PRIMING light series **EASY**

RB series

In case of emergency.

The pump self-priming system is given by air jabbering in the pump body and, thanks to the particular casing interaction with the volute, it is quick and reliable.

Pump standard construction is anticorodal aluminium which is suitable for marine applications, the pump Volute and impeller are in abrasion resistant tempered aluminium.

In-line ports to easily manage the pipes, and to inspect the impeller without disassembling them.

Great inspection and cleaning window, openable without using any tools and disconnecting the pipelines.

The internal Volute is easily replaceable.

Pump on tubular frame with petrol engine.

SELF-PRIMING on LIGHT TRAILER

RB series

For construction or continuous works.

Its particular pump body's design allows the self-priming without the need for pre-filling of liquid in the pipes and avoiding the need of a foot valve installation.

The pump self-priming system is given by air jabbering in the pump body and, thanks to the particular casing interaction with the Volute, it is quick and reliable.

It comes as standard with diesel engine motor widely oversized, on light manual driven trailer (+T).

SELF-PRIMING on HEAVY TRAILER

RB series

For construction or continuous works.

Its particular pump body's design allows the self-priming without the need for pre-filling of liquid in the pipes and avoiding the need of a foot valve installation.

The pump self-priming system is given by air jabbering in the pump body and, thanks to the particular casing interaction with the Volute, it is quick and reliable.

It comes as standard with diesel engine motor widely oversized, on heavy type trailer (+TT), light manual driven trailer, with built-in tank.

ENGINE DRIVEN PUMPS

ROBUSTA
Hydraulic System

SELF-PRIMING on HEAVY DUTY TRAILER

RW series

For deep and long suction needs and for wellpoints systems. A vacuum pump is incorporated to the self-priming pump, which device, automatically separate and take out the air coming from the suction.

The main application suitability is found in case of long suction pipes installations or in wellpoints groundworks (water lowering).

It comes with heavy type (+TT), low speed trailer, with built-in tank.

>>> PAGE 72 - 83

on ROAD APPROVED TRAILER

It can be set up on road approved trailer, open to traffic.

It can operate directly from trailer.

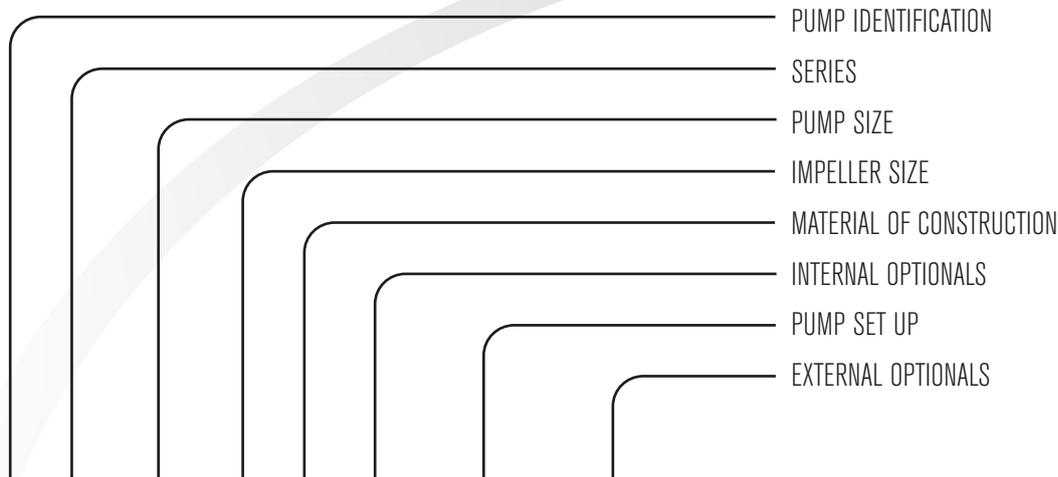

Equipped with stationary feet, spare tire and wide opening for accessories transport.

On demand we can supply:

- spotlight
- battery charger
- curtainsidering of the trailer.

PRODUCT NOMENCLATURE DESCRIPTION

R B 416 A A (L) KH44 (+G)

Note:
an "X" into the code means a special version.

PUMP IDENTIFICATION:

SERIES:

- B = Self-priming**
- C = Centrifugal**
- W = Vacuum-assisted**

PUMP SIZE:

- 4 16 = Delivery pump outlet 4" and nominal impeller diameter 160 mm**

IMPELLER SIZE:

- A = Greater Impeller size**
- B = Reduced impeller size**
- O = Full size impeller diameter**

MATERIAL OF CONSTRUCTION:

- A = Aluminium**
- B = Bronze**
- F = Cast Iron body, Stainless steel Volute, impeller and shaft**
- G = Cast Iron body**
- H = Cast iron body, internal components with erosion resistance cast iron**
- K = Stainless steel**
- Q = Cast iron body, internal components in marine bronze**

INTERNAL OPTIONALS:

- E = Stainless Steel impeller**
- K = Stainless Steel shaft**
- L = in-line outlet/inlet ports**

PUMP SET UP:

- xx## = Monobloc pump with endothermic motor**
- D, D4, D6 = Monobloc with electric three-phase explosion proof motor / ATEX**
- M = Monobloc with electric single-phase standard motor**
- ##K = Kit pump to normalized electric motor assembly B3-B5**
- ##D = Kit pump to diesel engine motor assembly**
- O = Set up for hydraulic motor assembly**
- S,S4,S6 = Bare shaft pump with support**
- / = Coupling to elastic joint on support (+ motor nomenclature)**
- T, T4, T6 = Monobloc pump with electric three-phase standard motor**
- T## = Monobloc pump with oversized electric motor power**
- [D##] = Threephase [explosion proof/ATEX] (Check electric motor datasheet)**

EXTERNAL OPTIONALS:

- +B = On basic base-frame**
- +BE = On basic base-frame with electric starter**
- +BT = On base-frame with built in tank**
- +D## = Equipped with oversized vacuum device (## = Nm³/h)**
- +G = On light tubular frame for transport by hand**
- +Q = With control panel**
- +SIL = With soundproof canopy**
- +T = On basic two wheels trailer**
- +TE = On basic two wheels trailer and electric starter**
- +TQ = On trailer with electric control panel**
- +TT = On trailer with built in tank**

ATEX VERSION

ROBUSTA electric pumps, bare shaft or base-frame with coupling versions, can also be supplied with ATEX certification, classified as follows:

GROUP II – devices intended for use in other places where there is a probability of explosive atmospheres occurring; this group in turn is divided into categories:

- **category 2** comprises products designed to guarantee a high level of protection for use in areas where there is a probability of explosive atmospheres occurring (>10 and <1000 hours/year), caused by gases, vapours, mists or mixtures of air and dusts.
- **category 3** comprises products designed to guarantee a normal level of protection for use in areas where there is a low probability of explosive atmospheres occurring (<10 hours/year), caused by gases, mists or mixtures of air and dusts (this category is considered lower than and therefore included in category 2).

The above categories, which are applied to the product, meet the requirements of the zones, specified below, in which the pump can be installed:

- **zone 1** area in which, during normal activities, the formation of an explosive atmosphere consisting in a mixture of air and inflammable substances in the form of gas, vapour or mist is likely to occur.
- **zone 2** area in which, during normal activities, the formation of an explosive atmosphere consisting in a mixture of air and inflammable substances in the form of gas, vapour or mist is not likely to occur, or likely to occur only for short periods.

Areas at risk of explosion are identified on the basis of the frequency and duration of the presence of explosive atmospheres; zones for which ROBUSTA pumps are certifiable relate to the presence of gases (not dusts identified by a double digit number, e.g. zone 21 or 22).

The temperature class is strictly dependent on the gases present, and determined by the user. Gases are divided into 6 temperature classes, from T1 (the mildest) to T6 (the most restrictive), which indicate the maximum surface temperature. ROBUSTA pumps can be certified in **temperature class T4**.

The **protection method** for ROBUSTA pumps, characterized by the symbol EEx, can be implemented using the following systems:

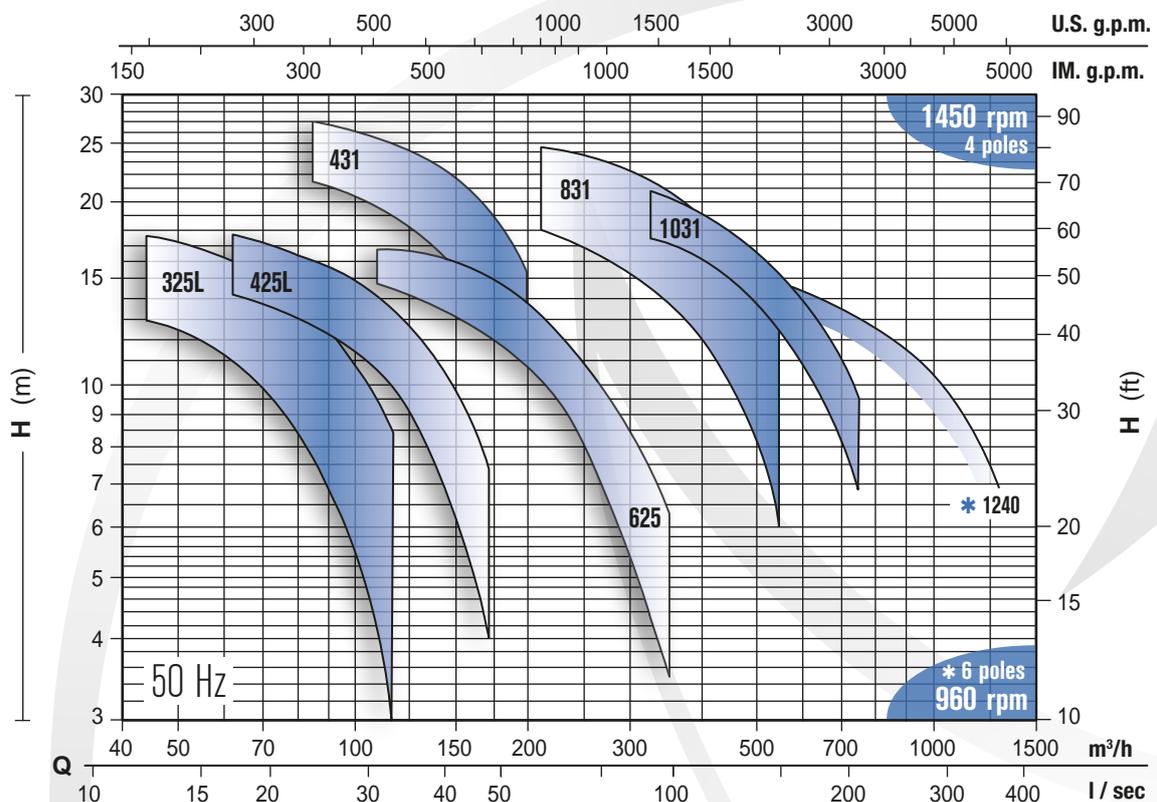

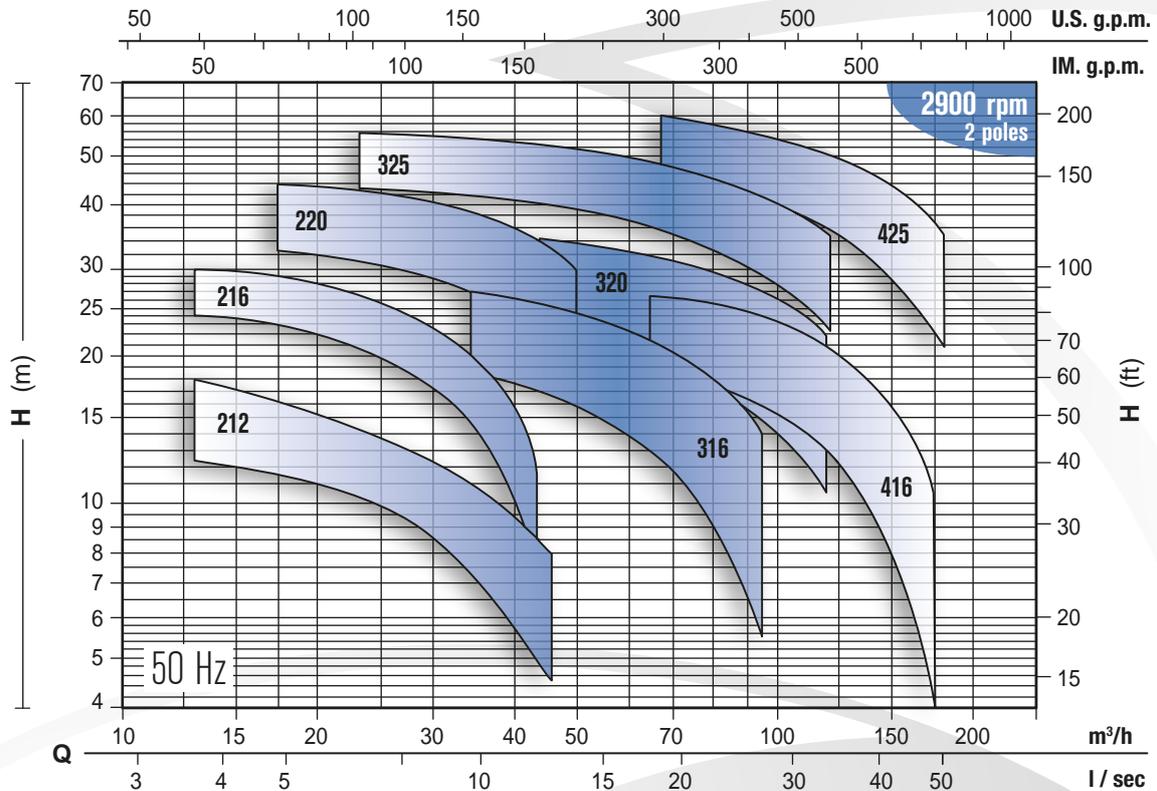

- EEx b monitoring with sensor
- EEx c intrinsically safe construction
- EEx d explosion proof housing

The standard symbol for ATEX classification of ROBUSTA pumps is

II 2G EEx c T4

SELF-PRIMING CENTRIFUGAL ELECTRIC PUMPS

RB212

The self-priming centrifugal pumps "Robusta" are designed to comply to the hardest and heavy duty applications, such as: building, emergency and industrial sectors. The open-blade double-curvature impeller, unique across the world, ensures a superior priming ability voiding the need of a foot valve installation. The high thickness of the pump body and of the impeller blades, allow the handling of more abrasive fluids and large passage of solids.

FEATURES

- ✓ EN-JL1030 cast iron construction according to UNI EN 1561 with modular body.
- ✓ Replaceable screw-less armoured internal volute in EN-JS1030 nodular cast iron according to UNI EN 1563
- ✓ Spheroidal cast iron impeller, designed with open-blade shape.
- ✓ Mechanical seal in high resistance hard metal.
- ✓ Large-size inspection hatches to facilitate cleaning and inspection.
- ✓ Standardised EN1092-1:2003 flanged inlet and outlet with built in threaded rod.

SELF-PRIMING CENTRIFUGAL ELECTRIC PUMPS

RB216

The self-priming centrifugal pumps "Robusta" are designed to comply to the hardest and heavy duty applications, such as: building, emergency and industrial sectors. The open-blade double-curvature impeller, unique across the world, ensures a superior priming ability voiding the need of a foot valve installation. The high thickness of the pump body and of the impeller blades, allow the handling of more abrasive fluids and large passage of solids.

FEATURES

- ✓ EN-JL1030 cast iron construction according to UNI EN 1561 with modular body.
- ✓ Replaceable screw-less armoured internal volute in EN-JS1030 nodular cast iron according to UNI EN 1563
- ✓ Spheroidal cast iron impeller, designed with open-blade shape.
- ✓ Mechanical seal in high resistance hard metal.
- ✓ Large-size inspection hatches to facilitate cleaning and inspection.
- ✓ Standardised EN1092-1:2003 flanged inlet and outlet with built in threaded rod.

SELF-PRIMING CENTRIFUGAL ELECTRIC PUMPS

RB325 L

POMPE • ITALIA

The self-priming centrifugal pumps "Robusta" are designed to comply to the hardest and heavy duty applications, such as: building, emergency and industrial sectors. The open-blade double-curvature impeller, unique across the world, ensures a superior priming ability voiding the need of a foot valve installation. The high thickness of the pump body and of the impeller blades, allow the handling of more abrasive fluids and large passage of solids.

FEATURES

- ✓ EN-JL1030 cast iron construction according to UNI EN 1561 with modular body.
- ✓ Replaceable screw-less armoured internal volute in EN-JS1030 nodular cast iron according to UNI EN 1563
- ✓ Spheroidal cast iron impeller, designed with open-blade shape.
- ✓ Mechanical seal in high resistance hard metal.
- ✓ Large-size inspection hatches to facilitate cleaning and inspection.
- ✓ Standardised EN1092-1:2003 flanged inlet and outlet with built in threaded rod.

The high thickness of the pump body and of the impeller blades, allow the handling of more abrasive fluids and large passage of solids.

FEATURES

- ✓ EN-JL1030 cast iron construction according to UNI EN 1561 with modular body.
- ✓ Replaceable screw-less armoured internal volute in EN-JS1030 nodular cast iron according to UNI EN 1563
- ✓ Spheroidal cast iron impeller, designed with open-blade shape.
- ✓ Mechanical seal in high resistance hard metal.
- ✓ Large-size inspection hatches to facilitate cleaning and inspection.
- ✓ Standardised EN1092-1:2003 flanged inlet and outlet with built in threaded rod.
